

-Universal Coving-

a Z-Group Enterprises LLC Product

Thank you very much for your interest in the **Universal Coving** by Z-Group Enterprises.

Unique in its design, the **Universal Coving** System uses a combination of features to create a positive locking and watertight seal. This cove system was designed with the cleanroom, laboratory, and food processing market in mind. Eliminating 90° inside corners with a smooth cove system is imperative for rooms that require frequent cleaning. A thoroughly cleaned room or lab will improve yield, decrease error, and decrease the likelihood of micro-organism growth.

The notched interlocking fastening system creates a positive lock to apply pressure to your smooth surface with our soft-edge cove. When engaged, the soft edge seals tightly against the wall, floor, or ceiling surface to create an easy to clean corner. This application is required for pharmaceutical applications and is recommended for any food processing applications or any other facility where cleaning occurs regularly and bioburden is a concern.

Furthermore, the **Universal Coving** System can be installed by using various screws or double-sided adhesive depending on your application. Care will need to be taken to ensure a proper surface for mounting the **Universal Coving** System.
